Optimization Parameters

Maximum Iterations (maxiter)

10

Multiplier Tolerance (xatol)

0.010 - +

RMSE Watt Tolerance (fatol)

100.0 - +

Automated Synthetic Twin Calibration Dashboard

Upload your structural files, define evaluation constraints, and watch the calibration loop converge in real time.

Step 1: Upload Simulation Artifacts

Upload Baseline Model (.idf)

Drag and drop file here

Limit 200MB per file • IDF

Browse files

delhi without daylight.idf
1.0MB

Upload Weather Profile (.epw)

Drag and drop file here

Limit 200MB per file • EPW

Browse files

IND_DL_New.Delhi-Gan...
1.5MB

Upload EnergyPlus Dictionary (.idd)

Drag and drop file here

Limit 200MB per file • IDD

Browse files

Energy+.idd
4.4MB

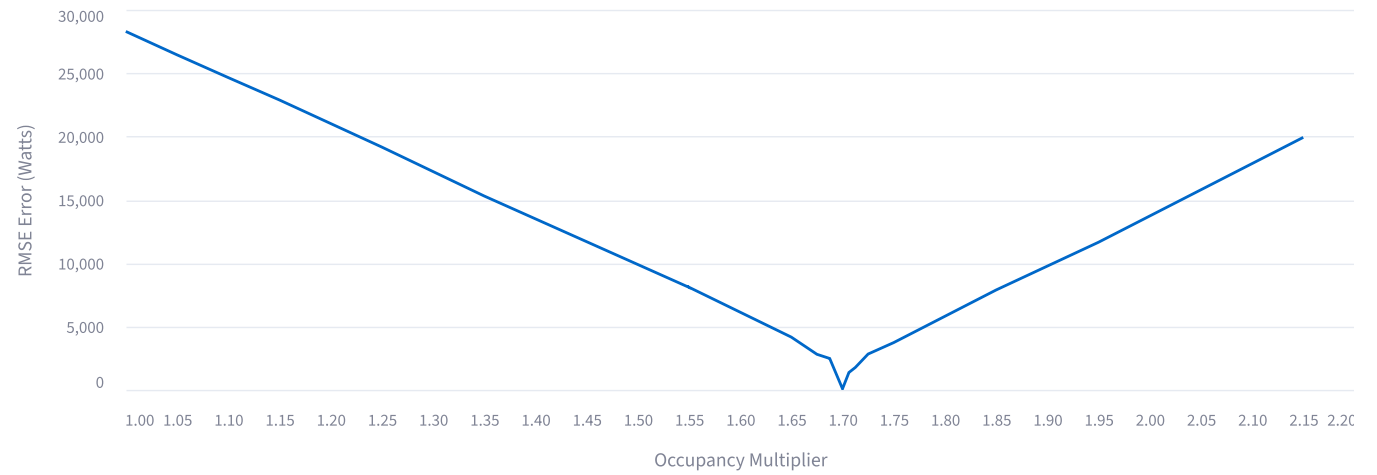

Step 2: Calibration Execution & Analytics

Start Automated Calibration Loop

Writing files to local workspace...

Workspace loaded! Optimization engine initializing...

 **Calibration Complete!** 

Discovered Optimal Multiplier

x1.7000

Final Converged RMSE Error

85.05 W

Loop finalized via constraint threshold: Maximum number of iterations has been exceeded.
